

# Project Submission Guidelines

Due Date: 11:59PM 04/28/2015

A major component of your grade (25%) will be based on your final project, which you have chosen. Along with your code you must submit a project report as well. Your final report will be an extension to your initial proposal that you wrote earlier. Your final report should include the following sections:

Title

Abstract

Introduction and motivation

Background information necessary to make the report self contained

Detailed problem description

Describe the architecture of your solution

Describe the implementation of that architecture.

A thoughtful conclusion

References

You will be graded on all of these parts. I am looking for deep understanding of the problem you chose to approach, good taste in your solution architecture, and a well-executed and (where appropriate) well-measured implementation.

Submit your project code and other data along with the final project report after zipping them all together.
